

GLEIDSON GUILHEM

BACKEND ENGINEER – API & AUTOMATION

 github.com/gleidsonguilhem  linkedin.com/in/gleidsonguilhem/

PROFILE INFO

Backend Engineer with experience building cloud-based applications, API integrations, and automation solutions. Skilled in .NET, Azure, and workflow automation tools, translating requirements into reliable technical implementations. Strong focus on system integration, operational efficiency, and cross-functional collaboration.

EDUCATION

2010 - 2013

ANHANGUERA UNIVERSITY
Bachelor of Information Systems

SKILLS

- Workflow Automation
- API Integration
- SQL
- Cloud Computing (Azure, AWS)
- CI/CD (GitHub Actions)
- Backend Development (.NET Core, C#)
- Web Development (Blazor, Razor, MudBlazor)
- Node.js & TypeScript
- Python
- n8n Automation
- Stagehand (Playwright)

PROFESSIONAL SKILLS

- Agile Collaboration
- User Stories & Acceptance Criteria
- Problem Solving
- Stakeholder Communication
- Process Improvement
- Analytical Thinking
- DevOps

WORK EXPERIENCE

Ethos Building & Restoration 2024 - PRESENT
Senior Systems Analyst

- Designed and developed internal business applications using .NET Core (C#), Blazor, and Azure SQL
- Maintained and enhanced full-stack applications, contributing to frontend, backend, and reusable components
- Developed workflow automation using n8n and Stagehand (Playwright) to extract and process data across systems
- Built automation to streamline a time-intensive estimating process, significantly reducing manual effort
- Managed Azure infrastructure and supported application environments
- Implemented CI/CD pipelines using GitHub Actions to improve deployment reliability
- Supported system integrations and ensured consistent data flow between platforms

HydroTerra Pty Ltd 2021- 2024
Systems Analyst

- Developed a Python application to automate data ingestion, processing, and presentation from IoT devices to AWS EC2
- Integrated external APIs to support automated data workflows
- Improved reliability of legacy systems through restructuring and automation
- Supported cloud-based systems and application performance

PROJECTS

- Endata Claims Automation – Automation solution built with Stagehand and TypeScript to streamline claims workflows.
- Admin Portal & Web API – Developed using Blazor, Razor, and C# (.NET Core), including backend services and integrations.
- Data Extraction & Notification App – Task automation system using Stagehand and JavaScript for data processing and alerts.
